Curriculum Vitae

Harald Vogt is a researcher at SAP Research, which he joined in 2006. His main research interests are distributed systems, pervasive computing, and software engineering, with an application focus on energy systems. Currently, he is active in research projects where models are developed for the operation of smart electricity grids and the smart integration of electric vehicles. Results will prepare SAP's industry solutions to meet future requirements in the utility and automotive sector. Before joining SAP he pursued his PhD in secure communications for wireless sensor networks at ETH Zürich. In the 20th century, he spent a few years at the Darmstadt research center of Deutsche Telekom AG, where he investigated the security of Java smartcards. Harald Vogt holds a diploma (master level) degree in computer science from the University of Ulm, Germany, and a PhD in computer science from ETH Zürich, Switzerland.
